TERRARIUM WORKSHOPS

**BRING ECOSYSTEM
SCIENCE TO LIFE**

Introduce your students to the wonders of ecosystems and the science behind them with our engaging, hands-on terrarium workshops.

Our programs are designed to align with the curriculum, offering distinct workshops tailored specifically for primary and high school students.

The programs provide an immersive experience where students explore fundamental ecological principles while creating their very own self-sustaining ecosystem.

About the Program

Developed by Helen, the founder of Helen's Mini Worlds and a Bachelor of Science (Adv.) graduate, this workshop provides an engaging opportunity for students to create their own terrarium. Our comprehensive package equips teachers with all necessary materials and content, allowing them to confidently lead the session without requiring an external facilitator.

What's Included?

- Complete set of materials for each student to create their own terrarium to keep (this includes plants, base layers, glassware, tools, a variety of decorations and more). Delivered the week before you plan to run the sessions. The plants and moss will need to be kept somewhere with bright but no direct sunlight until use. Helen's Mini Worlds will return to pickup the equipment on the week following your workshop.
- Digital step-by-step terrarium assembly guide.
- Educational content tailored to primary or high school levels (powerpoint slides and digital posters relating ecosystem science in terrariums to that on Earth).
- Worksheets with answers
- Risk assessment form.

**Cork Lid
Jars**

**Glass
Jars**

School Requirements

- A suitable classroom or workspace for students to assemble their terrariums (it may get messy!).
- Teacher-led facilitation using the provided digital slides. Helen's Mini Worlds provides the package for teachers to run the program and will not be facilitating the session on the day.
- Projector/screen to display instruction guide on.
- Disposable gloves for each student.

Pricing & Booking

We offer flexible pricing based on class sizes and glassware chosen. Price per student depends on the total number of students (higher number of students decreases the price per student). We require a minimum of 20 students.

Recycled Glass Jars (School Provided)*: \$6-\$14 (+GST) pp
Glass Jars: \$11-\$19 (+GST) pp
Cork Lid Jars: \$26-45 (+GST) pp

*Many schools choose this option because it is budget-friendly and teaches students about recycling. This option requires the school to provide the jars (many choose to arrange for students to bring in their own jars from home. They must be fully cleaned with labels removed. 8-16cm high, 5-10cm wide).

Delivery/Pickup Charges: Free pickup from in-store (1/194 Prospect Road, Prospect) or we can deliver the materials to you for a charge (based on your distance from our store).
